Sungho Park

simonpsh@outlook.kr · Munich, Germany · github.com/Sungho-Park-DE

M.Sc. Data Engineering and Analytics student at TUM (B.Sc. Computer Science plus Statistics, LMU) who builds LLM systems for real business workflows — consumer-advice case checking, phone-order intake, legacy-ERP automation — designed so that the model proposes and deterministic rules or people decide. Professionally interested in applied AI, process mining and value engineering; academically in 3D vision and video understanding.

EDUCATION

M.Sc. Data Engineering and Analytics 04/2026 – present
Technical University of Munich (TUM), Munich
- Expected graduation: 03/2028
- Relevant coursework: Computer Vision III, 3D Scanning & Motion Capture, Introduction to Deep Learning, Machine Learning, Fundamentals of Foundation Models, Cloud-Based Data Processing

B.Sc. Computer Science plus Statistics 10/2021 – 03/2026
LMU Munich, Munich
- Final grade: 1.9 (German scale)
- Bachelor's thesis (carried out at Universität der Bundeswehr München): "Large Language Models to Analyze Business Models" — grade 1.3

B.Sc. IT-Systems Engineering 10/2020 – 09/2021
Hasso Plattner Institute (HPI), Potsdam
- Transferred to LMU Munich

Studienkolleg Sachsen 03/2019 – 02/2020
Leipzig University, Leipzig
- University entrance qualification exam (Feststellungsprüfung), technical track

EXPERIENCE

Software Developer (service contract) GitHub ↗ 08/2026 – present
Shinhwa Automotive Parts Co., Ltd. — KGM (formerly SsangYong) parts dealership, Korea (remote)
- Built a quote-automation system for the dealership's order workflow: a web app for order intake and repair templates, plus a bot that enters quotes into the legacy ERP (IE/ActiveX) via COM scripting
- Integrated the parts catalogue (EPC) to resolve part numbers from the vehicle VIN
- Designed a client–server setup (mini-PC server in Germany, browser-only office PCs) for remote operation and maintenance from Munich
- Production code is private (customer data); the design and safeguards are published on simulated systems

Student Tutor 10/2024 – 08/2025
LMU Munich, Institute of Computer Science
- Software Development Practical (WS 2024/25): led an exercise group independently; assisted with supervising and grading exams
- Programming Practical for the AI minor (SoSe 2025)

Working Student — IT Systems & Database Maintenance 03/2024 – 09/2025
Shinhwa Automotive Parts Co., Ltd. (remote, 8 h/week)
- Maintained the parts master data: updated part numbers after manufacturer changes and re-linked dependent parts (supersessions and cross-references)
- Managed the company's IT infrastructure, PCs and network

Freelance Event Operations Manager & Interpreter 03/2019 – present
Freelance, alongside studies
- Ran and supported 15+ on-site projects across Europe (trade fairs, corporate workshops, public-sector study tours) for Samsung, LG, Kia, HD Hyundai and KOTRA — typically leading an on-site team of 5–8 promoters and 2 Korean staff
- Local Manager, Kia Designers' Europe Workshop (2024): from the client tender to delivery — 6-day tour programme across 3 countries for 11 participants
- Local Manager, Samsung Automotive Roadshow 2026 (3 German OEM sites, 5 participating Samsung affiliates): operations plan, VIP tour scenarios, local staffing
- Korean · German · English interpreting for corporate and public-sector delegations

Database Management & Maintenance 09/2014 – 09/2016
Shinhwa Sangsa — automotive parts dealership, Korea
- Built a tool-based database system and supported maintenance of the PostgreSQL parts database

PROJECTS

Live call-to-quote autofill GitHub ↗ 2026
Personal project, follow-up to the dealership system
- Built a pipeline that turns a live phone call into text (ElevenLabs realtime STT) and lets a decision model (Jev) pre-fill a parts-quote form from fixed option lists, with a human confirm step
- Evaluated on 22 labelled, staged calls: 74–75 of 78 field values filled with 0 wrong; ~3.5× faster per decision than a general LLM (0.43 s vs 1.5 s)

Case checker for consumer advice — Verbraucherzentrale Bayern GitHub ↗ 2026
Legal Loves Tech hackathon 2026 (developer, team of 3) · follow-up presentation to VZ Bayern, 10/2026
- Built a tool that checks a consumer case against a stored legal checklist and drafts the matching template letter, with every sentence traceable to a quote from the documents
- Architecture: local pseudonymisation; an LLM only classifies documents and extracts fields (validated); a deterministic three-valued rule engine (JSON rules) makes the decision

Verifiable legal RAG GitHub ↗ 2026
Personal project
- Built a framework-free RAG pipeline for legal documents (pymupdf4llm, ChromaDB, Anthropic SDK with structured outputs and tool use)
- Added a deterministic trust layer: every LLM claim must carry a verbatim quote that code verifies against the source; 51 offline verification checks

Munich Hacking Legal hackathon 2026
START Munich / TUM Legal Tech Colab
- Dual developer/PM role: RAG pipeline setup and pitch design

LLM-based analysis of enterprise models (Bachelor's thesis) 2025
LMU Munich / Universität der Bundeswehr München
- Built a CLI tool in which a local LLM (Llama 3.2 via Ollama, LangChain) interprets UML and BPMN 2.0 / ARIS models from XML/XMI and answers natural-language questions about them
- Designed Map-Collapse-Reduce chunking for large models, plus natural-language editing with export back to XSD-validated XML

SKILLS

Programming	Python, SQL, R, C++, Java
AI / ML	PyTorch, LangChain, Ollama (local LLMs)
Methods	RAG, LLM evaluation, human-in-the-loop design, rule-based automation, process modelling (BPMN, UML)
Tools	Git, Docker, Linux, AI-assisted development (Claude Code)
Languages	Korean (native) · German (C1, interDaF level 3 = DSH-3) · English (C1)
